### Tech Used In Projects TECH SYSTEM FOR FINTECH STARTUP

- JavaScript
- Node.js and Express.js
- MongoDB
- NPM Used
  - axios.
  - zod validator.
  - bcrypt to hash password details.
  - nodemailer
  - cors
  - dotenv
  - JWTToken
  - node-cron
  - twilio
  - aws-sdk
  - @aws-sdk/client-s3
  - @aws-sdk/credential-provider-env
  - multer
- React.js
- AWS(S3 Bucket, EC2)

## Experience

### SOFTWARE ENGINEER

#### 1. Meraqui Ventures Pvt. Ltd,Pune

#### PROJECT

- 📅 Jan 2022 – July 2023 📍 Pune, MH
- Developed Candidate Registration System, stored the data in MongoDB.
  - Campaign Management:
    - Streamlined and tracked marketing campaigns.
    - Improved efficiency and data flow effectiveness through multiple dashboards.
  - Dashboard for Sourcing Manager, Sourcing Head, Director and Founder:
    - Enabled data-driven decision-making and optimized sourcing strategies.

#### API INTEGRATION

- AI Calling:
  - Extracted data from Excel files, transformed it into JSON format, and seamlessly communicated with the Rootle portal through API and ensure real-time synchronization with the Rootle platform. Parsed the data into MongoDB Database.
- Candidate On-boarding:
  - implemented an API integration system for seamless data transmission from external sources to our core system
- MTD Report:
  - Getting the Revenue Data through an API and then build the dashboard.
- Client List:
  - API integration to get client details from our core system to the application
- Master Dashboard:
  - Getting data through API from Core system to the application to keep a track on recruiter's data and their performance.

#### 2. Sahayak Drvy Foundation, Jaipur

#### PROJECT

- 📅 Aug 2023 – Present
- User Authentication and Authorization
    - Implement a robust authentication system to verify the identity of users (field agents, managers, admins).
  - Approval Workflow::
    - Developed an approval workflow system where field agents submit applications or requests that need approval, alert Notifications to managers through SMS and email.
  - Data Handling:
    - Extracted Data from CSV file and parsed into MongoDB Database.
    - Local Server File Storage: Used multer for handling file uploads on the local server.
    - AWS S3 Storage: Leveraged multer-S3 to upload files to AWS S3 bucket.
  - API Integration
    - APIs Integration for bank verification and Aadhaar verification to automate the verification process.
  - Security
    - Authentication: Employed JsonWebToken to secure API endpoints
